License Optimization

Comprehensive Backup

Mailbox & Drive Provisioning

METALOGIX ESSENTIALS FOR OFFICE 365

Simple. Powerful. Unified.

One complete solution to move, manage, and secure content in Office 365

An End-to-End Solution for Office 365 Lifecycle Management

Metalogix Essentials for Office 365 provides all the functionality needed to perform the lifecycle management of an Office 365 environment in a single, unified platform – with one installation. From onboarding and day-to-day user and environmental analysis and optimization, to security and backup/restore operations, Essentials for Office 365 reduces administrative workload while ensuring that Office 365 remains secure and efficient.

Pre-Migration Analysis

Identify and avoid potential pain points in your onboarding process. Incompatibilities, disallowed file types, and many other potential hindrances to your migration are identified and color coded by order of severity and explained in easy-to-understand terms to allow for quick and painless remediation.

Single Hop Migration to the Cloud

Essentials for Office 365 lets you migrate farms, tenancies, site collections, sites, lists, libraries, content, workflows, webparts, permissions, metadata, term stores, and more – individually or in bulk. Regardless of the source environment, you can preserve values for lookup fields, managed metadata fields, and approval status as well as convert string, choice lookup, managed metadata and person/group fields into a desired target field type.

Next Generation Analysis

Essentials for Office 365 scours your environment and uses interactive dashboards to pinpoint and display where users are producing the most content, how it is being used, what's trending, who is most active, and identify correlations between content, the environment , and user behavior.

Cross-Service Management

Take control over your environment, users, and content across Active Directory, Office 365 Licensing, SharePoint, Exchange, and OneDrive without the need to login to multiple administrative portals and learn disparate processes.

Data Democratization

Give your users the ability to manage their own content through the use of a centrally-deployed application that puts the controls directly in the ribbon of their SharePoint interface. Determine who needs access, grant it through the admin interface, and users will immediately have the ability to tag, move, upload and download in bulk, and organize their content right from SharePoint.

Discover Security Flaws

Find and highlight security flaws that have the potential to expose you to data breaches. Discover orphaned users as a result of employee turnover, as well as disabled and deleted users who still have access. Identify potentially exposed objects and quickly secure them.

Take Action

Take the complexity out of permissions, security, user, and group administration.. One click of a button lets you create, clone, edit, and delete users, permissions, and groups within Office 365 individually or en-masse. With a single interface, performing complex security operations is easy and efficient, reducing lead times for system training.

Tech Specs

Supported Source Systems
- SharePoint 2007
- SharePoint 2010
- SharePoint 2013
- Office 365
- Google Drive
- OneDrive
- Box
- Dropbox
- Fileshares
- File System
- Public Folders

Supported Target Systems
- Office 365
- OneDrive

Single, Extensible Platform

Administer your Office 365 environment from a single, unified user interface, eliminating the need for disparate administrative portals and custom PowerShell scripts while providing access to powerful analysis, remediation, migration, backup, and security functionality. Essentials for Office 365 puts complete control of your environment at your fingertips.

Environmental Optimization

Discover and re-allocate unused licenses and make the most of your Office 365 investment while reducing extra service costs. Gain unparalleled insight into the state of your environment, Metalogix Essentials for Office 365 provides an interactive, easy to understand dashboard with actionable reports that allow you to ensure that your environment is in optimal condition.
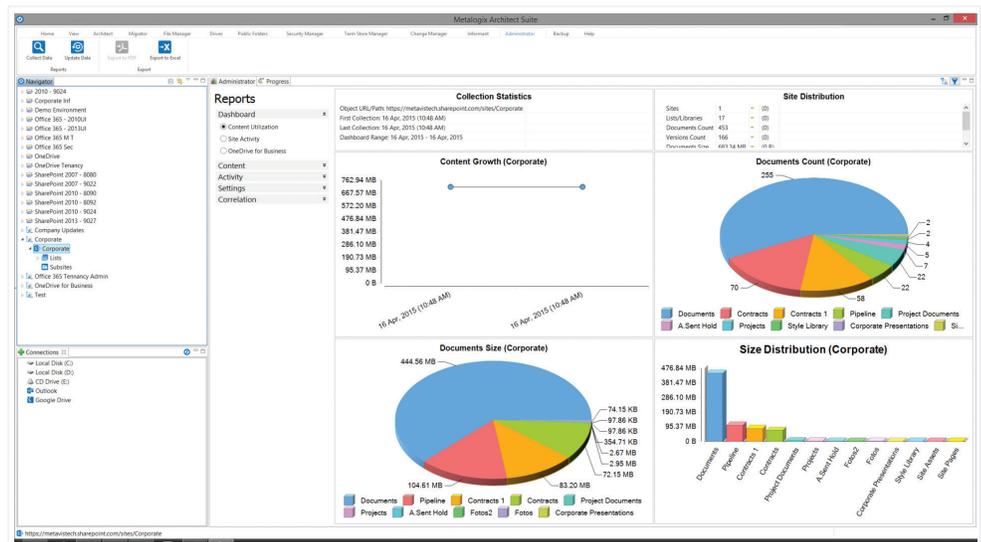

Automated Management

Eliminate the need to maintain separate records of departmental SharePoint, Exchange, and OneDrive quotas, access privileges, and more. Save time and reduce errors in the setup process by creating templates that apply the right services and systems to users or groups automatically.

Complete Content Control

Take complete control of all content whether you're migrating it from file shares, SharePoint, another Office 365 tenant or content management system, or a combination of them all. Essentials for Office 365 supports easy upload or migration to Office 365 (including OneDrive) while taking action on metadata and converting to an Office 365-friendly format.

Built for the Cloud

Conceived to fully leverage advantages of the Cloud, Essentials for Office 365 utilizes multithreading and an agent-less, single install solution to get the most performance and compatibility out of the resources made available through Office 365.

About Metalogix

Metalogix is the premier provider of management software to move, manage and secure content for Office 365, SharePoint, OneDrive for Business, Exchange, Box, Dropbox, Amazon, Google and other enterprise content management (ECM) systems. Over 20,000 client rely on Metalogix and the industry's highest rated LIVE 24x7 support to enhance the use, performance and security of content collaboration in the cloud, on-premises and in hybrid environments.
