

METALOGIX SENSITIVE CONTENT MANAGER

Detection. Classification. Action.

Next Generation SharePoint Data Loss Prevention

Raising the Bar for SharePoint Data Loss Prevention

Organizations operate in challenging regulatory environments against a backdrop of highly public data breaches which results in requirements for properly identifying and securing terabytes of content. The complexity of governing, tracking and securing this content has been magnified due to the growth of content management systems, like Microsoft SharePoint, which enable content collaboration on an enterprise-wide scale. Metalogix Sensitive Content Manager combined with Metalogix ControlPoint provide wide ranging content detection, classification and actions to support comprehensive enterprise-wide security, governance and compliance strategies.

Powered by Patent Pending Machine Learning

Metalogix redefines Data Loss Prevention (DLP) for sensitive content such as PII in SharePoint both on-premises and in the cloud. Powered by advanced machine learning technologies, Metalogix Sensitive Content Manager surpasses existing data protection strategies and provides a far higher

degree of accuracy for context aware identification, filtering and classification of content. Other DLP solutions employ rules and techniques that amount to little more than "Ctrl + F" to find PII, Metalogix Sensitive Content Manager provides a forensic analysis of the true nature of your content.

Confidently Detect the Presence of PII

Metalogix Sensitive Content Manager provides a highly accurate and flexible out of the box solution for detecting PII inside enterprise content management systems that can also be customized to meet specific client needs. The combined solution will allow clients to identify, track, and secure documents using advanced neural network powered machine learning, which enables a more robust level of contextual content awareness inside increasingly complex enterprise environments. In other words the large numbers of "false positive" results that cause other DLP solutions to grind to a halt are now a thing of the past for detecting PII.

Take Action

Upon detection of PII content that exceeds permissible thresholds,

ControlPoint can alert, isolate, or remove policy violating files. Custom workflows can be architected with ease to enforce corporate governance strategies while reducing the workloads on SharePoint administrators, content owners and compliance officers.

Complete Policy Enforcement for SharePoint PII

By leveraging ControlPoint's existing security, compliance and administration capabilities, the addition of Sensitive Content Manager can enforce policies using the full range of SharePoint permissions management, auditing and user activity reporting to content containing PII. With on-demand

Tech Specs

Supported Systems

- SharePoint 2013 (Server & Foundation)
- SharePoint 2010 (Server & Foundation)
- Windows Server 2003, 2008 or 2012
- SQL Server 2005, 2008 or 2012
- Internet Explorer 8, 9, 10 & 11, Chrome, Firefox

scanning, administrators can flag specific libraries, sites, or site collections for content discovery or enable a real-time content shield to perform analysis of files as they are created, modified, moved, or destroyed.

Real-time Content Shield

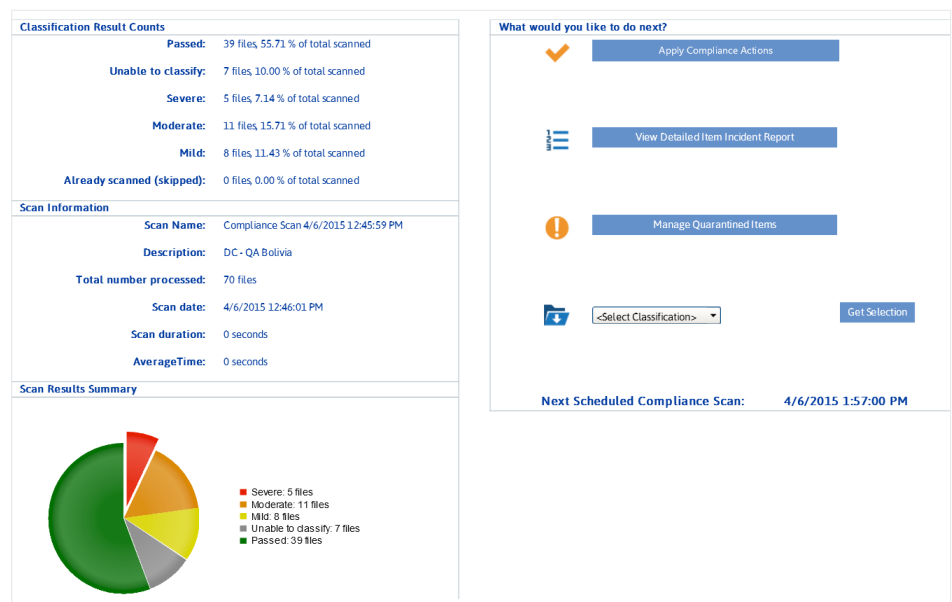

Sensitive Content Manager can be deployed to automatically provide almost instantaneous detection of PII within newly added SharePoint Content. Upon detection of content containing PII, the upload can be blocked or quarantined until approved by designated content reviewers. For documents containing PII such as social security numbers, Metalogix Sensitive Content Manager infuses a higher level of real time trust and content awareness to prevent the mishandling of this sensitive data.

Superior Approach, Superior Results

The combination of the complexity of content collaboration and the risks associated with security breaches results in a need for far more sophisticated security and compliance solutions. Metalogix Sensitive Content Manager is the first solution to leverage the Metalogix next generation machine learning engine to provide a deeper level of insight and analysis into the location and nature of sensitive content.

Ready to Go Out of the Box

Thanks to the machine learning technologies powering Metalogix Sensitive Content Manager, the solution is ready to go from day one. Lengthy consultative configuration exercises such as rule configuration are now a thing of the past. With Metalogix Sensitive Content Manager you get instant protection and an immediate start on your return on investment.

About Metalogix

Metalogix provides industry-recognized management tools for mission-critical collaboration platforms. These tools are engineered and supported by experts committed to the rapidly evolving deployment and operational success of our clients.

Metalogix' world-class tools and client service have proven to be the most effective way to manage increasingly complex, and exponen-

tially growing metadata and content across collaboration platforms.

For over a decade, Metalogix has developed the industry's best and most trusted management tools for SharePoint, Exchange, and Office 365, backed by our globally acknowledged live 24x7 support. Over 20,000 clients rely on Metalogix Tools every minute of every day to monitor, migrate, store, synchronize, archive, secure, and backup their collaboration platforms.

Metalogix is a Microsoft Gold Partner, an EMC Select Partner, and a GSA provider. Our Client Service division of certified specialists is the winner of the prestigious NorthFace ScoreBoard Award for World Class Excellence in Customer Service.
