

## Enterprise PST Visibility, Control & Migration

TransVault™ Insight delivers policy-based risk analysis, monitoring, enforcement and reporting against the contents of an organization's PST files.

It gives business and IT managers the power to find PSTs across the enterprise, understand what they contain and then start managing PST content in line with business and operational needs, either by managing 'in place' or by migrating content directly into Microsoft Exchange, Office 365 or virtually any 3rd-party email archive.

**Granular Control:** TransVault Insight lets you profile, analyze and manage PST contents according to many different criteria including age, size, custodian, sender, message class, attachments, etc. Example policies and commands include:

- Collect items less than 18 months old into Microsoft Exchange primary mailbox.
- Move items more than 18 months into Office 365 online archives.
- Delete all items older than 7 years in place
- Collect all items sent between identified custodians/dates for central inspection.

**Assurance:** Insight lets you monitor every aspect of your PST estate and ongoing management activity. For example, you can track the progress of your policy-based enforcement and produce reports to give you peace-of-mind that your PSTs are under control.

**Scalability:** TransVault Insight has been designed with a highly scalable yet low-footprint framework that eases the process of locating and interacting with PST files across complex and/or distributed environments.

### Get Insight, Get in Control

PSTs are notoriously problematic to IT departments:

- They're difficult to backup when on users' local disks.
- Large PSTs are prone to slow performance and corruption.
- They're storage inefficient and even the smallest update requires a full file backup.
- Storing PST files on shared networks is not recommended.

PSTs also pose a potential, yet difficult to quantify risk to the business:

- PST files can't easily be searched by the business (they are pretty much a 'black box').
- Staff carry mass volumes of emails around 'unprotected' on laptops, and can easily extract PSTs onto removable drives.
- They're excluded from centralized records management and may contain rogue emails that are not properly disposed of.

**TransVault Insight lets you understand your distributed PST content, and take control.**

## Scalable, 3-Tier Architecture

### Get Unparalleled Visibility

Whether located on network file servers, local disks, office-based systems, roving laptops or removable media, Insight gives organizations a total, overall view of their PST content with the ability to drill down on areas of interest:

- Are there items older than our corporate retention policy?
- Is there old/orphaned data that needs cleaning up?
- Are PSTs in places they shouldn't be (e.g. on removable media)?
- Is evidence relevant to an eDiscovery exercise out there?

'Top offenders' lists and management reports and graphs help determine what action, if any, to take.

### Manage In Place

If, for whatever reason, you can't remove PSTs altogether, TransVault Insight lets you manage PST content 'in situ'. Just like a centralized archive, Insight puts a range of functions at your fingertips, such as:

- Maintain a central backup
- Delete specified items (e.g. emails older than 5 years)
- Get a copy of emails sent between Mr X & Ms Y on a given date
- Flag all newly created files

At all times Insight keeps track of activity, providing progress updates and reports to demonstrate policy enforcement.

### Perform Mass Migration to Central Archives

Selected contents of all or specific PST files can be moved quickly, incisively and securely to a specified location such as a central PST store or to a new or existing email archive. You can also move entire PST files.

### Migrate to Virtually Anywhere

TransVault Insight supports EWS-based ingestion directly into Microsoft Exchange mailboxes, personal archives or Office 365. It also supports migration into a centrally managed PST repository, hosted archives that import PSTs, as well as all leading 3rd-party archives (requires **TransVault Insight Premium**).

All PST activity is monitored via a real-time dashboard, with the ability to track any errors and re-run an import as needed.

Tricky issues such as ownership mapping are automatically taken care of. And, if a legacy archive has led to shortcuts in PSTs, TransVault Insight Premium lets you manage them as needed, for example, replacing them with the full item before migration to Exchange personal archives.

### Buying TransVault Insight

TransVault Insight is available through a global network of partners that provide an end-to-end service. For more information, including TransVault partners please visit [www.TransVault.com](http://www.TransVault.com) or email [info@TransVault.com](mailto:info@TransVault.com)
