# Email Archive Migration in 'the Cloud'

Available through a global network of migration specialists and archive solution vendors, TransVault™ Migrator for Hosted Platforms is a software application that enables fast and secure movement of legacy email records into cloud-based email and email archive services.

Many hosted service platforms offer low cost, high-volume email storage, however moving your legacy email records into this service can be a non-trivial exercise.

TransVault Migrator provides a flexible and secure mechanism for extracting emails directly from your archive, and then passing this data into the cloud.

TransVault Migrator delivers superior performance and fidelity, together with full auditing. It also offers unique user productivity features such as managing legacy shortcuts to ensure a seamless experience for end users.

❝ We have now decommissioned our legacy archive & have been able to release the associated costs ❞

Legacy Archives

PST Files

Hosted Archive

TransVault Migrator: Unparalleled scalability, flexibility and auditing for your migration.

Key Benefits

- Lets organizations eliminate the costs and overheads of maintaining onsite archives.

- Zero impact on users - even in 24 x 7 environments.

- Direct and API support for many different archive platforms.

- Deletes/converts legacy shortcuts to avoid end user confusion post-migration.

- Provides a complete audit of each individual item extracted ensuring chain-of-custody.

- Ability to filter items dependent on advanced criteria, e.g. only move data less than 2 years old.

- Automatically re-writes addresses where needed to support company mergers etc.

- Automation removes the risks of data loss associated with manual extraction.

- Enables organizations to prove due-diligence when moving email records.

- Allows data to be packaged as stipulated by the hosted service.

- Supports EWS-based network connections to Office 365 and other platforms.

- Available through a global network of specialist archive & migration partners.

Reduces Migration Costs & Risks

The expense, time and risk associated with manually extracting data from legacy archives can make migration into the cloud prohibitive, leaving you with islands of data and escalating maintenance bills.

TransVault Migrator accelerates the process of migrating archived emails to your preferred hosted service, while freeing up your old archive servers and storage.

You can also take advantage of TransVault's advanced analysis and filtering capability to streamline your move by migrating only the data you need to meet business and legislative requirements.

Importantly, TransVault Migrator delivers a secure, fully audited service that eliminates the risk introduced by human error and provides detailed reports that record exactly what data is being handed over to your hosted service provider.

Fast, High-Fidelity Migration

Depending on your environment,TransVault's high performance engine can extract large volumes of data at a time, ensuring nothing is lost in the process.

Each individual item is tracked, and if the extraction of any item fails, TransVault automatically re-tries. You can also migrate while your legacy system is still archiving, relying on Migrator to detect and move any newly archived items.

Reports detailing exactly how much data has been extracted and any permanent failures (usually due to corruptions in the archive) are also available.

Enhanced Compliance

Some organizations have a legislative requirement to retain data - and ensure its integrity - for years, even decades.

TransVault maintains a complete audit of all data transfers and generates detailed reports to ensure chain-of-custody for each individual item as it is passed to the hosted service provider.

This report is vital, especially where your data is to be managed under separate auspices, as it will be the only proof you have that certain data items have been handed over. In the event of a future eDiscovery case involving migrated items this evidence could be invaluable.

Advanced Shortcut Management

The unique TransVault Mailbox Services Engine can either delete or convert legacy shortcuts as needed to work seamlessly with the new hosted environment.

It will even let you not move data where users have deleted shortcuts from their mailboxes. No other migration route has as much flexibility.

Email Format Conversions

Organizations planning to switch from Notes to Exchange (or vice versa) as they move to the cloud can use TransVault to perform both a migration and email conversion.

Email addresses can optionally be re-written to reflect changes in domains or addressing conventions (e.g. following an acquisition).

Supports Multiple Environments

Migrator connectors are available to support extractions from the following archives, formats and storage platforms:

- Microsoft Exchange (including Exchange 2010 Personal Archives)
- Symantec Enterprise Vault for Exchange & Notes
- Autonomy Message Manager (formerly CA Message Manager)
- Autonomy ZANTAZ EAS for Exchange & Notes
- Autonomy NearPoint (formerly Iron Mountain/Mimosa NearPoint)
- EMC EmailXtender for Exchange & Notes
- EMC SourceOne for Exchange & Notes
- HP RISS (IAP) for Exchange, Notes & SMTP
- IXOS-eCONserver (Open Text)
- Ilumin Assentor
- Quest Archive Manager
- Unify/Daegis Central Archive (formerly AXS-One) for Notes
- PST, EML, MSG & NSF files

Supported hosted platforms include:

- Mimecast, Proofpoint & LiveOffice (Symantec Enterprise Vault.cloud)
- Microsoft Office 365
- Autonomy ZANTAZ Digital Safe

New connectors are being added all the time or can be commissioned. Check supported platforms and exact version number with your partner or TransVault Software.

Buying TransVault Migrator

TransVault Migrator is available through a global network of partners that provide an end-to-end migration service that typically includes analysis of your existing archive and commissioning of your new archive service.

For more information contact TransVault at Info@TransVault or visit www.TransVault.com

Challenge	The TransVault Migrator Service
User impact	• users keep working as their data is migrated • shortcuts managed to work with new archive service
IT Overheads	• eliminates cost of maintaining multiple archive solutions
Data fidelity	• proven email format fidelity & logging • preserves contents of mailboxes, journals & public folders*
Migration Time	• bulk extractions can be carried out non-stop at any time • multi-threaded architecture supports extremely fast processing rates • single instancing option significantly reduces migration times
Costs	• allows legacy archives to be safely decommissioned, releasing licence, hardware & maintenance overheads • streamlines the migration process, saving considerable manpower costs
Change	• fast transition to new service without loss of data or accessibility
Compliance	• preserves integrity of historic data • full audit trail of all extractions ensuring chain-of-custody • provides a vital record of data movement to prove due-diligence to external bodies
