

## Fast-track your email archives into the Cloud

TransVault™ Sprint is the quickest, simplest and most cost-effective way to on-board your legacy email archives into the cloud.

Is the expense and complexity of moving your legacy email archives a major hurdle in your cloud strategy?

TransVault™ Sprint is the answer.

With Sprint we've taken the experience we've gained from over 1,000 migration projects and rolled it into a clever new interface that expertly guides your move.

Sprint accelerates the migration process with 'drag and drop' ease, allowing you to be as hands-on as you want. Our global partner network delivers a menu of services including a fully managed end-to-end migration, an assisted migration with initial set up, training and handover, or a completely self-service approach.

**Sprint is the sure-fire way to move your email records.**

As well as shrinking the time and effort involved, Sprint delivers a full 1:1 audit trail for every item moved, enabling you to demonstrate due diligence.

Users are also ensured a great experience, with Sprint cleaning up legacy shortcuts and moving all the right items into the right folder locations in the cloud.

### Key Benefits

- Builds on the experience gained from over 1,000 migration projects to deliver optimal results.
- Simple, progressive disclosure interface accelerates your migration project.
- Unique hybrid connector into Enterprise Vault delivers ultimate extraction speeds without compromise on data access.
- Formats emails for optimal ingestion into all leading cloud archive services.
- Ensures a seamless experience for end users through advanced shortcut management and synchronization.
- Minimizes data volumes to be transferred by enabling selective migrations.
- Uses Symantec-approved connector to ensure data integrity and support.
- Tracks extraction progress in real-time showing detailed status updates.
- Meets compliance needs by way of full auditing and reporting to prove chain-of-custody.
- Available through a global network of specialist 'assisted migration' partners or as a self-service application.

## Simplify Your Migration to the Cloud

TransVault Sprint is a high-performance Windows-based application designed to accelerate and simplify the movement of email records from Symantec Enterprise Vault into the cloud.

At each stage of your migration we've used our experience of over 1,000 migrations to streamline the process.

Simply select the user groups to be migrated from Active Directory and define rules for filtering your data.

For example:

- Move items less than 3 years for the IT department
- Move items less than 10 years for the Finance department
- Don't move items where users have already deleted shortcuts

Sprint takes care of the rest, using optimal, default settings to deliver unbeatable performance, ease and reliability.

## Unrivalled Performance - Without Compromise

Reducing the time taken to move your data is vital.

That's why Sprint comes pre-tuned to deliver the fastest results but without risking the integrity or completeness of what gets migrated.

For example, the quickest way to your extract data is to use our direct connection into the Enterprise Vault archive store, but we know there are times when the API is the only viable option.

With Sprint you'll get a **totally unique hybrid connector that dynamically switches between a direct and API connection as needed to give you ultimate speed and reliability.**

## Ensure Compliance

Many organizations have a legislative requirement to retain data - and ensure its integrity - for years, even decades.

Sprint's detailed reports that audit the extraction of each individual item will help you prove chain-of-custody and verify completeness of evidence in the event of a future eDiscovery case.

### Challenge    The TransVault Sprint Solution

User impact	<ul style="list-style-type: none"><li>• users maintain seamless access to their legacy archives</li><li>• shortcut status &amp; access rights fully synchronized</li></ul>
IT Overheads	<ul style="list-style-type: none"><li>• streamlines the migration process with a guided, expert UI</li></ul>
Data fidelity	<ul style="list-style-type: none"><li>• proven email format fidelity &amp; logging</li><li>• preserves contents of mailboxes and journals</li></ul>
Migration Time	<ul style="list-style-type: none"><li>• bulk migrations can be carried out non-stop at any time</li><li>• optimal connections into source and destination combined with proven high-performance engine delivers the industry's fastest migration speeds</li></ul>
Costs	<ul style="list-style-type: none"><li>• automates and simplifies the migration process, saving considerable manpower and licence costs</li><li>• allows legacy archives to be safely decommissioned releasing licence, hardware &amp; maintenance overheads</li></ul>
Change	<ul style="list-style-type: none"><li>• facilitates the move to the cloud without loss of data integrity or accessibility for end users</li></ul>
Compliance	<ul style="list-style-type: none"><li>• full audit trail of all migrations ensuring chain-of-custody</li><li>• ensures all data is managed &amp; discoverable in one place</li></ul>

## End User Transparency - With No Surprises

Moving end users to a new system can be disruptive, so ensuring they still have easy and logical access to their archived data is critical.

That's why at TransVault we've always paid close attention to 'the end user experience' - both during and after a migration.

**What does this mean?** Users tend to work with shortcuts to archived emails in the same way they do original messages; moving them between folders, forwarding them to co-workers, deleting them, etc.

So when you're running a migration, Sprint ensures that the end user's 'view' of their archive is automatically reflected in the new archive.

This involves tracking the current status of all shortcuts, so that users don't end up with deleted items re-appearing, or items being migrated into the wrong folder or no longer accessible.

## Sprint-Assisted Migrations

With Sprint we've removed the complexity and reduced the cost of your migration, but we figured you might still like some hand-holding.

That's why Sprint is available from our global network of TransVault partners as a fully-managed or assisted service, or as a self-service migration plus support. **The choice is yours.**

Sprint is available in test-mode for you to pre-check your migration.

And, if your journey to the cloud encounters some turbulence, such as corruptions in your source archive requiring data remediation services, don't worry:

With Sprint there's a smooth upgrade path to our flagship product, TransVault Migrator, which delivers ultimate flexibility along with a bespoke service proven to address virtually any set of requirements - however complex and unique.

## Supported Platforms

Sprint supports migration from Symantec Enterprise Vault and HP Autonomy EAS into a range of cloud vendors including Microsoft Office 365, Mimecast, Symantec Enterprise Vault.cloud, Proofpoint, Google, Sonian and many more.

For information on other platform support contact TransVault.
