Fast-track your email archives to Microsoft Exchange™

TransVault™ Sprint is the quickest, simplest and most cost-effective way to on-board your legacy email archives to Microsoft Exchange.

Are you one of the many organizations looking to take advantage of the extended storage in Exchange and remove the overhead of using a third-party archive?

**TransVault™ Sprint is the answer.**

With TransVault Sprint we've taken the experience gained from over 1,000 migration projects and rolled it into a clever and innovative interface that expertly guides you through the process of migrating archives back to Exchange.

Sprint accelerates the migration process with 'drag and drop' ease, automatically re-hydrating archived items and putting them back into Exchange primary or archive mailboxes.

TransVault Sprint is the sure-fire way to move your email records.

Sprint not only shrinks the time and effort involved in moving your email records, it also delivers vital chain-of-custody along with a comprehensive audit trail for every item moved.

With TransVault Sprint users are always ensured of a great and unmatchable migration experience. Sprint automatically cleans up legacy shortcuts, while moving all the right items to the proper folder locations within Exchange.

Archives (for all task runs)	Messages	Retrieval	Health — Percentage of exceptions
80%	100%	100%	0% — 100%

Migrated 40	Migrated 6363	Direct 6363	Skipped 0
Partially 3	Processed 6363	API 0	Failed 0
Total 50	Total Unknown	Processed 6363	Processed 6363

Migration progress | Archive progress | Performance | Complete | Drag to complete | View log

Key Benefits

- Builds on the experience gained from 1,000+ migration projects to deliver optimal results.

- Simple, progressive disclosure interface accelerates your migration project.

- Direct 1-step migrations from Enterprise Vault and EAS to Exchange minimizes time and risk.

- Unique hybrid connector into Enterprise Vault delivers ultimate extraction speeds without compromise on data access.

- Filtered migrations to primary mailboxes or In-Place Archives.

- Ensures a seamless experience for end-users through advanced shortcut management and synchronization.

- Minimizes data volumes to be transferred by enabling selective, policy-based migrations.

- Uses connectors approved by both Symantec and Microsoft to ensure data integrity and support.

- Keeps your data secure with direct, tamper-resistant transfers and no interim steps.

- Meets compliance needs by way of full auditing and reporting to prove chain-of-custody.

- Available through a global network of partners offering 'assisted' and 'full service' migrations.

- Supports hybrid migrations into Exchange or Office 365 in the one solution.

Simplify Your Migration to Microsoft Exchange

TransVault Sprint is a high-performance Windows-based application designed to accelerate and simplify the movement of email records from Symantec Enterprise Vault or HP Automomy EAS into Microsoft Exchange.

Sprint moves your email records across the network in **one step** using connectors that link directly from your legacy archive back into Exchange.

This approach avoids the need for multiple steps (e.g. extraction to PST or EML files), interim storage and manual intervention that can lead to expense and risk the integrity and security of your data.

Built-In Intelligence - Drag-and-drop Ease

At each stage of your migration we've used our experience of over 1,000 migrations to streamline the process.

Simply enter your source and destination connection credentials, select the user groups to be migrated from Active Directory and define rules for filtering your data. For example:

- Move items less than 6 months to primary mailboxes
- Move items older than 6 months to In-Place Archives
- Don't move items older than 10 years

Sprint takes care of the rest, using optimal, default settings to deliver unbeatable performance, ease and reliability.

Unrivalled Performance - Without Compromise

Reducing the time taken to move your data is vital. That's why Sprint comes pre-tuned to deliver the fastest results but without risking the integrity or completeness of what gets migrated.

We've engineered the optimum connection into Exchange using MAPI protocols. And, if you have a hybrid setup and want to migrate selected archives to Office 365, in-built TransVault™ CloudStream technology delivers high-speed end-to-end transfers. Sprint also includes Microsoft-certified Drive Shipping support where the network is a bottleneck.

Sprint also ensures the quickest extractions from your legacy archives using its **totally unique hybrid connector that automatically switches between a direct or API connection as needed to give you ultimate speed - again - without compromising data integrity.**

Challenge	The TransVault Sprint Solution
User Impact	• users maintain seamless access to their legacy archives • shortcut status & access rights fully synchronized
IT Overheads	• streamlines the migration process with a guided, expert UI
Data Fidelity	• proven email format fidelity & logging • preserves contents of mailboxes and journals
Migration Time	• bulk migrations can be carried out non-stop at any time • optimal connections into source and destination combined with proven high-performance engine delivers the industry's fastest migration speeds
Costs	• automates and simplifies the migration process, saving considerable manpower and licence costs • allows legacy archives to be safely decommissioned releasing licence, hardware & maintenance overheads
Change	• facilitates the move to Exchange or the cloud without loss of data integrity or accessibility for end users
Compliance	• full audit trail of all migrations ensuring chain-of-custody • ensures all data is managed & discoverable in one place

Ensure Compliance

Many organizations have a legislative requirement to retain data - and ensure its integrity - for years, even decades.

Sprint's direct, source-to-target transfers with no interim storage or files avoids a scenario where your data could be inadvertantly lost or intentionally tampered with 'in transit. This, combined with defensible, policy-based data selections and detailed reports that audit the migration of each individual item will help you prove chain-of-custody and verify completeness of evidence in the event of a future eDiscovery case.

You also have the option to migrate the contents of your journal archives into Exchange, using TransVault to reconstruct vital BCC and Distribution List recipients for eDiscovery purposes.

End User Transparency - With No Surprises

Moving end users to a new system can be disruptive, so ensuring they still have easy and logical access to their archived data is critical.

That's why at TransVault we've always paid close attention to 'the end user experience' - both during and after a migration.

What does this mean? Users tend to work with shortcuts to archived emails in the same way they do original messages; moving them between folders, forwarding them to co-workers, deleting them, etc.

Sprint ensures that the end user's 'view' of their archive is automatically reflected in Exchange. This involves tracking the current status of all shortcuts, so that users don't end up with deleted items re-appearing, or items being migrated into the wrong folder or no longer accessible.

Sprint-Assisted Migrations

With Sprint we've removed the complexity and reduced the cost of your migration, but we figured you might still like some hand-holding.

That's why Sprint is available from our global network of TransVault partners - as a fully-managed end-to-end service or as an assisted service with install, training & handover. **The choice is yours.**

Sprint is available in test-mode for you to pre-check your migration. And, if your journey to the cloud encounters some turbulence, such as corruptions in your source archive requiring data remediation services, don't worry: With Sprint there's a smooth upgrade path to our flagship product, TransVault Migrator, which delivers ultimate flexibility along with a bespoke service proven to address virtually any set of requirements - however complex and unique.

Supported Platforms

Sprint supports migration into Microsoft Office 365 from Symantec Enterprise Vault and HP Autonomy EAS (now owned by Capax Global).
