TransVault™ SPRINT

Fast-track your email archives to Microsoft Office 365™

TransVault™ Sprint is the quickest, simplest and most cost-effective way to on-board your legacy email archives to Microsoft Office 365.

If you are like most businesses today, the expense and complexity of moving your legacy email archives are your biggest hurdles to the Cloud.
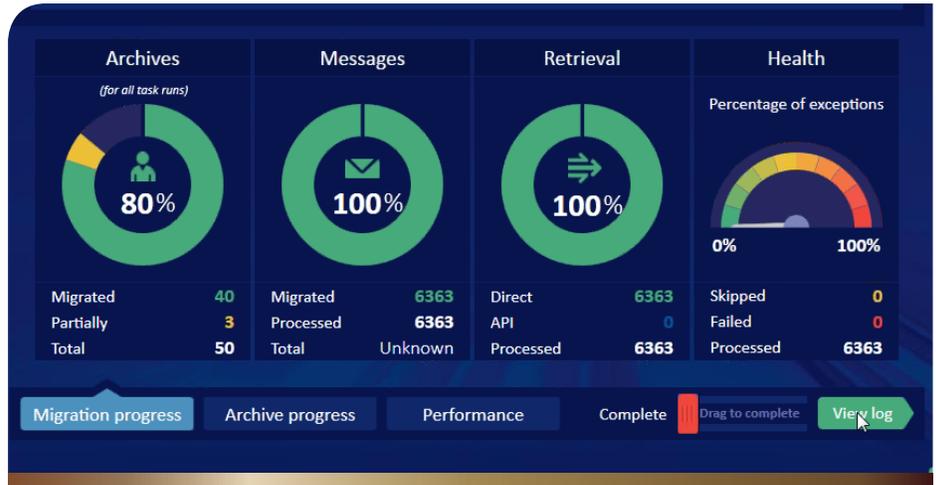

TransVault™ Sprint is the answer.

With TransVault Sprint we've taken the experience gained from over 1,000 migration projects and rolled it into a clever and innovative interface that expertly guides you through the process of migrating archives back to Office 365.

Sprint accelerates the migration process with 'drag and drop' ease, automatically re-hydrating archived items and putting them back into Office 365 primary mailboxes or In-Place Archives.

Sprint not only shrinks the time and effort involved in moving your email records, it also delivers vital chain-of-custody along with a comprehensive audit trail for every item moved.

With TransVault Sprint users are always ensured of a great and unmatchable migration experience. Sprint automatically cleans up legacy shortcuts, while moving all the right items to the proper folder locations within Office 365.

Archives	Messages	Retrieval	Health
(for all task runs)			Percentage of exceptions
80%	**100%**	**100%**	0% 100%
Migrated 40	Migrated 6363	Direct 6363	Skipped 0
Partially 3	Processed 6363	API 0	Failed 0
Total 50	Total Unknown	Processed 6363	Processed 6363

Key Benefits

- Builds on the experience gained from 1,000+ migration projects to deliver optimal results.

- Simple, progressive disclosure interface accelerates your migration project.

- Direct 1-step migrations from Enterprise Vault or EAS to Office 365 minimizes time and risk.

- Unique hybrid connector into Enterprise Vault delivers ultimate extraction speeds without compromising data integrity.

- Filtered migrations to primary mailboxes or In-Place Archives.

- Ensures a seamless experience for end users through advanced shortcut management and synchronization.

- Minimizes data volumes to be transferred by enabling selective migrations.

- Uses connectors approved by both Symantec and Microsoft to ensure data integrity and support.

- Keeps your data secure with direct, tamper-resistant transfers and no interim steps.

- Meets compliance needs by way of full auditing and reporting to prove chain-of-custody.

- Available through a global network of partners offering 'assisted' and 'full service' migrations.

- Supports hybrid migrations into Office 365 or Exchange in the one solution.

Windows Server 2012 Certified

Simplify Your Migration to Office 365

TransVault Sprint is a high-performance, Windows-based application designed to accelerate and simplify the move of email records from Symantec Enterprise Vault or HP Autonomy EAS into Microsoft Office 365.

Sprint moves your email records across the network in **one step** using connectors that link directly from your legacy archive into the Cloud.

This approach avoids the need for multiple steps (e.g. extraction to PST or EML files), interim storage and manual intervention that can lead to expense and risk the integrity and security of your data.

Built-In Intelligence - Drag-and-drop Ease

At each stage of your migration we've used our experience of over 1,000 migrations to streamline the process.

Simply enter your source and destination connection credentials, select the user groups to be migrated from Active Directory and define rules for filtering your data. For example:

- Move items less than 6 months to primary mailboxes
- Move items older than 6 months to In-Place Archives
- Don't move items older than 10 years

Sprint takes care of the rest, using optimal, default settings to deliver unbeatable performance, ease and reliability.

Unrivalled Performance - Without Compromise

Sprint comes pre-tuned with TransVault™ CloudStream, a combination of the latest Microsoft ingestion technologies, sophisticated algorithms - such as traffic flow analysis - and transactional processing techniques to offer high-speed end-to-end transfers, direct from on-premises archives into Office 365.

Sprint also ensures the quickest extractions from your legacy archives using its totally unique **hybrid connector** that automatically switches between a direct or API connection as needed to give you ultimate speed without compromising data integrity.

In the event where network speeds are a limiting factor, customers have the option of using Azure-based migrations or Microsoft's new Drive Shipping service, for which TransVault was first to be fully certified.

Challenge	The TransVault Sprint Solution
User Impact	• users maintain seamless access to their legacy archives • shortcut status & access rights fully synchronized
IT Overheads	• streamlines the migration process with a guided, expert UI
Data Fidelity	• proven email format fidelity & logging • preserves contents of mailboxes and journals
Migration Time	• bulk migrations can be carried out non-stop at any time • optimal connections into source and destination combined with proven high-performance engine delivers the industry's fastest migration speeds
Costs	• automates and simplifies the migration process, saving considerable manpower and licence costs • allows legacy archives to be safely decommissioned releasing licence, hardware & maintenance overheads
Change	• facilitates the move to the cloud without loss of data integrity or accessibility for end users
Compliance	• full audit trail of all migrations ensuring chain-of-custody • ensures all data is managed & discoverable in one place

Ensure Compliance

Many organizations have a legislative requirement to retain data - and ensure its integrity - for years, even decades.

Sprint's direct, source-to-target transfers with no interim steps avoids a scenario where your data could be inadvertently lost or intentionally tampered with 'in transit. This, combined with defensible, policy-based data selection and detailed reports that audit each item moved will help you prove chain-of-custody and verify completeness of evidence in the event of a future eDiscovery case.

You also have the option to migrate the contents of your journal archives into the cloud, with TransVault™ Compliance Time Machine automatically mapping vital compliance data into the new Office 365 compliance model.

End User Transparency - With No Surprises

Moving end users to a new system can be disruptive, so ensuring they still have easy and logical access to their archived data is critical.

That's why at TransVault we've always paid close attention to 'the end user experience' - both during and after a migration.

What does this mean? Users tend to work with shortcuts to archived emails in the same way they do original messages; moving them between folders, forwarding them to co-workers, deleting them, etc.

Sprint ensures that the end user's 'view' of their archive is automatically reflected in Office 365. This involves tracking the current status of all shortcuts, so that users don't end up with deleted items re-appearing, or items being migrated into the wrong folder or no longer accessible.

Sprint-Assisted Migrations

With Sprint we've removed the complexity and reduced the cost of your migration, but we figured you might still like some hand-holding.

That's why Sprint is available from our global network of TransVault partners - as a fully-managed end-to-end service or as an assisted service with install, training & handover. **The choice is yours**.

Sprint is available in test-mode for you to pre-check your migration. And, if your journey to the cloud encounters turbulence, such as company-specific data types not recognized in Office 365, or corruptions in your source archive requiring data remediation services, don't worry:

With Sprint there's a smooth upgrade path to our flagship product, Migrator, which delivers ultimate flexibility along with a bespoke services proven to address virtually any set of requirements - however complex.

Supported Platforms

Sprint supports migration into Microsoft Office 365 and/or Microsoft Exchange from Symantec Enterprise Vault and HP Autonomy EAS (now owned by Capax Global).
